PEST FACTS

Did you know...

Fleas, ticks and mosquitoes can transmit diseases and make your pets feel downright uncomfortable.

FLEAS

- Fleas can carry a variety of diseases.
- Washing your pet's bedding can help remove fleas during the early stages of development.

TICKS

- Ticks can stay attached to their hosts for as long as two weeks.
- Once detached from their host animal, a tick can survive for several years between meals.

MOSQUITOES

- Mosquitoes can transmit parasites like heartworms, which can grow to adult-size in your pet.
- Mosquitoes can become a serious health problem for your pet even when no disease has been transmitted.

As always, talk to your veterinarian about your pets' parasite prevention.
